HIGH SLIP RESISTANCE

- High slip resistance for tensile, frictional and combined load applications.
- Static slip resistance of 15,736lbs or tensile 56,200lbs (4 x A490 bolt config., size 1").
- Suitable for parallel and tapered flanges up to 10° (for example S-beams).
- The tail spans slotted clearance holes.

➤ Choose the correct tail length / packing combination to suit the flange thickness, see page 12. Location plate / end plate details can be found on page 13.

➤ Lindapter recommends the use of DTI Washers when using A325 or A490 structural bolts with the Type AF / AAF. For further information refer to page 58.

1) Slip Resistance figures are based on Type AF and Location Plates in hot dip galvanized finish calculated against slip (movement exceeding 0.004" / 0.1mm).

2) Shot blast and painted steel.

3) 3.2:1 Factor of Safety.

* Torque figures based on bolts / setscrews in an unlubricated condition. For further information on lubricated fasteners see page 58.

Tail Length / Packing Piece Combinations for Type AF

Choose the correct combination for your configuration using the table on the right. Please note these calculations are for parallel flanges and beams up to 10° slopes only.

For example, a 3/4" Type AF on a 1 9/16" flange requires 1 x Type AF medium tail (M), 1 x Type AFCW and 2 x Type AFP2.

Location and End Plates for Types AF, AAF and CF

These plates ensure the clamps and bolts are located in the correct position relative to the supporting steel. If you would like help choosing a suitable plate, please contact Lindapter.

Location Plate

What is it?

Location plates are simple fabricated items designed to sit between the two sections to be clamped together to ensure the bolts are fixed at the correct centers.

Material: Structural steel A572 Grade 50.
For other grades contact Lindapter.
